ISBN-10: 0688419054

ISBN-13: 978-0688419059

Product Dimensions: 0.5 x 6.5 x 8.8 inches

Shipping Weight: 12 ounces

Average Customer Review: 5.0 out of 5 stars 14 customer reviews

Best Sellers Rank: #1,858,422 in Books (See Top 100 in Books) #88 in [Books > Teens > Education & Reference > Science & Technology > Experiments & Projects](#) #271 in [Books > Teens > Hobbies & Games > Games & Activities](#) #558 in [Books > Humor & Entertainment > Puzzles & Games > Magic](#)

Customer Reviews

Vicki Cobb is the author of many award-winning science books for young people. With degrees from Barnard College and Columbia University Teachers College, Vicki enjoyed an early career as a science teacher. She now devotes all her time to writing and speaking to teachers, children, and librarians all over the country. She frequently writes for the Huffington Post and is also the founder and president of iNK Think Tank, an organization dedicated to getting high-quality nonfiction books into classrooms. To find out what recent science experiment Vicki has been cooking up, visit her online at www.vickicobb.com. --This text refers to an out of print or unavailable edition of this title.

This is a fun engaging book with the material presented in such a way that the reader can use the information to challenge his friends and know he will win the challenge. Each challenge (test of a scientific principle) presented explains the science behind how it works in easy-to-understand language. The author is quite good at making complex explanations, simple. This is a relatively old paperback. The cover is creative and colorful, but the contents are all black and white, so a bit dreary in that respect. The font is extremely small, which means a lot of material (text) on each

page, but most of them are broken up black and white sketches, showing what the challenge should look like, (set up, execution) and often is humorous, another inviting aspect to get kids to read the book.

I loved this book when I was younger and now my nieces are loving it too. Fun for kids in 3rd grade and up and a must for any child (or fun-loving adult) who loves science. I will note that some experiments involve flames so adult help is best here if your child is younger side of the age category. I use my old copy as a fun thing for my high school students to participate in and they beg to read the book or "try something from that book" all year long. Everything can pretty much be done with household supplies and nominal set-up time. Also, the book explains WHY you 'can't' do it using science after every event. Perfect for getting kids talking and excited-- and learning-- about science. Last I heard this book is out of print so I had to buy a used copy. However it is well worth the time to hunt it down. Great book!

A favorite childhood book in my home, I had to purchase this for my kids. They love it! I find that I cannot flip through this book without trying some of them, in fact....that is how the book starts "bet you can't get to the end of this book without trying at least one of these challenges." Any and all of these could be great starts to a science project.

Science tricks to do to have fun, for older elementary kids with supervision, but there are some breathtaking science challenges to get kids curious about science.

My kid's had this book when they were growing up and loved it! So, I just bought it for my grandkids, too. My grandson loves it already. My daughter was so excited that I was still able to find this book!

This was a great book for my 10yr old son. Really interesting facts and he loves to challenge his friends

Great! Thanks!

I lost my copy because of moving so I HAD to have another. Best ever for motivating students in science classes!
