The Paris System For Reporting Urinary Cytology

Synopsis

This book describes a novel and proven approach to cytologically classify urinary samples for the detection of bladder cancer and lesions of the upper urinary tract. The new method is based on the collective experience of knowledgeable cytopathologists who have tested the terminology within their own laboratories for reproducibility and predictability of neoplasms of the urinary tract. Accompanying the written criteria for each diagnostic category are meticulously photographed exemplars of the cellular features, with cogently annotated descriptions of the photographs. The book thereby performs as an atlas for microscopists involved in diagnostic cytopathology at all levels of their education. Included in the targeted readership are experienced pathologists, cytotechnologists, and students of both professional groups. The new terminology also considers the clinical aspects of patient management. Written by experts in the field who convened at the 18th International Congress of Cytology in Paris, The Paris System for Reporting Urinary Cytology presents a global standard for reporting and a new philosophic approach that maximizes the strengths of detecting the potentially lethal high grade lesions by urinary cytology, and recognizes without apology the inability to reliably detect the low grade lesions in urinary cytology. The Concept has been endorsed by the American Society Of Cytopathology, and the International Academy of Cytology.

Book Information

Paperback: 159 pages

Publisher: Springer; 1st ed. 2016 edition (December 17, 2015)

Language: English

ISBN-10: 3319228633

ISBN-13: 978-3319228631

Product Dimensions: 6.1 x 0.4 x 9.2 inches

Shipping Weight: 12.6 ounces (View shipping rates and policies)

Average Customer Review: 3.8 out of 5 stars 4 customer reviews

Customer Reviews

“Standardization to aid the clinical decision making process is essential and the Paris

system provides a basis for both the pathologist and the clinician. The use of defined criteria and abundant photomicrographs in this book are a definite asset to this reporting system and provide strong scaffolding for future revisions as more data becomes available. This book will be very useful to cytopathology laboratories as they adapt to this reporting system. (Brenda J. Sweeney, The ASC Bulletin, Vol. LIV (1), January, 2017) "This book presents the standardized reporting system and nomenclature for urine cytopathology. The audience is pathologists and resident trainees who regularly practice cytopathology. Urologists and oncologists also will find the book useful in clinical practice. This is an excellent contribution to the cytology literature and should be in any cytologist's library. The illustrations are excellent and can assist pathologists when encountering difficult cases. Overall, this will make an excellent addition to departmental and pathologists' libraries. (Kyle D. Perry, Doody's Book Reviews, May, 2016)

This book describes a novel and proven approach to cytologically classify urinary samples for the detection of bladder cancer and lesions of the upper urinary tract. The Concept has been endorsed by the American Society Of Cytopathology, and the International Academy of Cytology.

Well-written review of the new urology cytology system of reporting. Will be even better once we have some data on the predictive power of each diagnostic category.

good experience

It is very up to date

This is a small little paperback, worth \$12. The single greatest scam ever perpetrated on me. What a shame. They should be embarrassed.
