The Rain Forests Of Home: Profile Of A North American Bioregion

Synopsis

The Rain Forests of Home brings together a diverse array of thinkers - conservationists, community organizers, botanists, anthropologists, zoologists, Native Americans, ecologists, and others - to present a multilayered, multidimensional portrait of the coastal temperate rain forest and its people. Joining natural and social science perspectives, the book provides readers with a valuable understanding of the region's natural and human history, along with a vision of its future and strategies for realising that vision. The Rain Forests of Home offers for the first time a unified description of the characteristics, history, culture, economy, and ecology of the coastal temperate rain forest. It is essential reading for anyone who lives in or cares about the region.

Jerry Franklin is Professor of Ecosystem Analysis, College of Forest Resources, University of Washington, Seattle, WA. Franklin is co-author of *Conserving Forest Biodiversity*, *Creating a Forestry for the 21st Century*, *Salvage Logging and Its Ecological Consequences*, and *Towards Forest Sustainability*, all from Island Press.

This was an ok read, just a little less meat than I was hoping for.

A breathtaking synopsis of North America's best kept secrets, "The Rain Forests of Home" give the reader an in-depth look at some of the most beautiful landscapes the earth has to offer. The intelligent insight from some of America's top biologists is verbalized in a way that even George W. could follow. This is a must read for anyone who takes interest in wildlife, nature, or just their surroundings in general. I had a fabulous time indulging myself in this fountain of information, and I highly recommend it.
