Horizons Mathematics K, Book 1 (Lifepac)

Synopsis

Horizons Math Kindergarten builds the foundation for the method of study that is used all the way through the Horizons Math program. Every concept follows a deliberate pattern of introduction and gradual development. Each lesson begins with a new concept or an expansion of a previously covered concept. This introduction starts a cycle of repetition and review that students will experience as they work through the lessons. Horizons Math Kindergarten lays a foundation for order and exactness. The daily practice in the student books teaches the recognition and printing of the numerals 0 to 100. Simple addition and subtraction from 0 to 10 are taught. the addition-subtraction concept is extended through 99 with the aid of counters and the number line. Counting through 100 is presented by 1's, 10's, 5's, 2's, 3's, and 4's. Principles of place value, measurement, calendar use, telling time, graphing, comparisons, and money concepts are also introduced.

Book Information

Series: Lifepac (Book 1)

Paperback

Publisher: Alpha Omega Pubns (April 2000)

Language: English

ISBN-10: 0740303090

ISBN-13: 978-0740303098

Product Dimensions: 0.2 x 8.2 x 10.8 inches

Shipping Weight: 12.6 ounces

Average Customer Review: 4.5 out of 5 stars 30 customer reviews

Principles of place value, measurement, calendar use, telling time, graphing, comparisons, and money concepts are also introduced.

I used Saxon math for my oldest for kindergarden, and then Horizon (book 1 only) for my second child. I found that just this book 1 was enough for the whole year, and was more advanced then the entire kindergarden math with saxon. So..... I am going to stick with horizon for my third child, but only use book 1 again, and resell book 2. My oldest did less advanced work with saxon in Kindergarden, and was able to do Horizon's first grade entire 2 book session fine (without having had a year of horizon beforehand). ** WARNING if you are looking for math curriculum for a kid under kindergarden age..... (such as preschool) I would recommend saxon's Kindergarden as it is easier and does not get as advanced at the end.....

Math is FUN! My 5 year old son typically does 1-3 lessons a day because he is not challenged by these early lessons. However, after glancing through the back portion of the book, I believe he will be adequately challenged as we continue. Colorful, interactive pages. The lessons are short and straightforward --- perfect kindergarten math curriculum.

My daughter LOVES this book. She is 5 years old and can't sit still. But with this book, she sits and focuses, and she can now do addition because of this book. It is very easy in the beginning, but after about Lesson 10, it's a bit more challenging for her. She would do 2 lessons per day and she has really enjoyed this book. It covers numbers recognition, the days of the week, the calendar, telling time, understanding addition, etc. I am so happy I got this for her. I would highly recommend it!

Great skill building exercises, covers numbers up to 100, ordinal numbers, beginning telling time, and the calendar, counting groups of things, and simple money counting.

I was really pleased with the Horizons Math workbook for my son. The lessons are short and straightforward. They are also fun! I would definitely recommend Horizons Math to any

homeschooling family!

Love Horizons Math through the third grade. It's comprehensive & easy to follow.

This is going to help my daughter learn a lot of math concepts that seem a little advanced for Kindergarten, but I am excited!!!

Best book for my 5 year old. She is enthusiastic to do the book..I make her only one chapter at a time so that she doesn't get bored. She says it's so fun .can i do the next chapter? Easy going and slowly increases the concept.Going to order the book 2 soon.
