# Research Techniques For The Health Sciences (5th Edition) (Neutens, Research Techniques For The Health Sciences)

## **Synopsis**

Research Techniques for the Health Sciences focuses on pragmatic aspects of health science research. Underlying concepts and theory are explained and illustrated through a common-sense approach utilizing case studies. All of the text's case studies are health-oriented in school, community, and hospital settings involving students, teachers, physicians, nurses, and health science researchers. This edition features more applied questions for the case studies, general guidelines on how to create a poster, journal publication, and oral presentation, and reorganized chapters.

## **Customer Reviews**

James J. Neutens, PhD, FASHA is the Dean of the College of Medicine-Knoxville at the University of Tennessee.

Amazing book for the price. No marks, highlighting or damage. Good quality.

This book is poorly written, & frequently presents simple subject in a complicated, confusing way. I wonder if mr. Neutens statistical formulas are even correct.

helpful resource

Book was in good condition

Just the book for any undergraduate or graduate student enrolled in a research class. An easy read and logically organized.

Book for daughter

The book arrived in great time, and was in good condition. Overall it was a good read, and was very helpful for my research class. It is also a great price.

In comparison to my other research text, this one is ok. It is not as easy to read and understand.
